

About Me

I just find myself one day watching Javascript and CSS videos on my spare time, and then I realized that I had to become a web developer.
The process between a problem and a solution is my favorite part of the job.

Lautaro López

React/Node Developer

Work Summary

- React/Node developer at Symfa | October 2022 to Present**
Technologies: React, Node, Typescript, AWS, PostgreSQL, Handlebars
Outline: I joined Symfa to participate in a PWA project for Reynolds American. In a few months I helped to improve the accessibility of the app, working with handlebars, raw CSS and typescript in the lambda tier of the application. After that, I moved to research improvements for the in-company applications while waiting for a new project.
Responsibilities:
 - Developed front end.
 - Developed back-end.
- React/Node developer at Tap Billetera/Payana | December 2021 to October 2022**
Technologies: React, React Native, Node, Typescript, AWS, PostgreSQL, DynamoDB
Outline: A digital wallet in React Native with an microservices based architecture in the backend, used by thousand of users in Argentina. The application allowed the users receive and send money to and from the wallet, pay various services such as bills, subscriptions, recharges, etc., among other features. After the application was discontinued the company moved to another application that helped small businesses to handle payments to providers and employees.
Responsibilities:
 - Understanding the business requirements and designed software including database and development of different modules and functionalities.
 - Develop new microservices/features.
 - Help in the design of the new application from scratch.
- React/Node developer at Softtek | August 2021 to December 2021**
Environment: React, Node, Typescript, GCP, PostgreSQL
Outline: A prospect enrollment application for a major health insurance company in Argentina, with it respective dashboard to help employees handle applications.
Responsibilities:
 - Understanding the business requirements for new features, such as biometric recognition.
 - Implementing new features and fixes to the platform.
 - Participate in the architecture design of the solutions.
- Freelance React developer for CAT Filmmaker | January 2021 to July 2021**
Environment: NextJs, React, Sanity, Node, Figma
Outline: Portfolio for a wedding photographer and filmmaker, with a respective dashboard to handle content.
Responsibilities:
 - Transform client needs into a beautiful design.
 - Implement the design into code with its functionality.
- Java developer at BPMX | November 2020 to August 2021**
Environment: Java, Gradle, Javascript, GWT, AWS, React
Outline: A private java framework and plugin. Also participated in the development of the company website.
Responsibilities:
 - Solving bugs and issues reported by the developers using the framework.
 - Replicate the design into code for the company website.
